Forecast for Thursday 29 Feb 2024

Weather: Mainly dry with sunny spells, with a chance of some showers for a time through the afternoon, these wintry over the highest peaks. Strong west to southwesterly winds with summit gales at times in the morning before easing through the afternoon.

Chance of cloud-free hill tops above 700m: Generally 70%, falling to 40% for a time in the afternoon.

Low cloud and visibility: Patchy cloud with frequent breaks for much of the day with bases typically around 800m or more and visibilities excellent. Cloud becoming more extensive for a time in the afternoon, with visibility and cloud bases rapidly falling in any showers.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Strong winds, particularly in the morning, will provide a wind chill and mean making progress is difficult. Visibilities will generally be excellent, but deteriorating in any showers in the afternoon meaning navigation is more difficult.

Forecast for Friday 01 Mar 2024

Weather: A band of rain, or snow above around 300m, will arrive across in the early hours and will likely persist through the morning. This most likely to clear away through the afternoon, leading to clear, dry conditions, but a low chance that a few showers will persist through the rest of the day.

Maximum wind: North to northwesterly 10-15mph, gusts of 25-30mph possible.

Chance of cloud-free hill tops above 700m: Less than 20% rising to 70% through the afternoon.

Low cloud and visibility: Extensive low cloud down to 200-300m throughout the morning and early afternoon, with visibility severely reduced in persistent snowfall, making navigation difficult.

Temperature: **Valleys:** Plus 3 to plus 5 Celsius.
At 700m: Minus 4 to minus 1 Celsius.
Freezing level: 200-300m.
